GREEN MATERIAL

HIGH THERMAL

FAST INSTALLATION

WALL & FLOOR PANEL DESIGN & CONSTRUCTION

APPLICATIONS

AAC panels are reinforced, and are designed for floors, walls, ceilings and roof applications in multi-residential, commercial, residential (domestic) and industrial construction.

MULTI-RESIDENTIAL CONSTRUCTION

- Non-loadbearing external wall panels, generally panels are fixed to a reinforced concrete structural frame.
- Internal wall panels – party walls/ risers/ shaft walls

INDUSTRIAL CONSTRUCTION

- Non-loadbearing wall panels, larger panels spanning either vertically or horizontally can be successfully incorporated into industrial wall applications.
- Mezzanine floors
- Ceiling panels – fire exits

AAC XBETON delivers a diverse number of environmental benefits compared to concrete

FIRE RESISTANCE

HIGH DURABILITY

LIGHTWEIGHT

KEY MARKET DRIVERS

REGULATORY EVOLUTION

Stricter energy codes (California Title 24, IECC 2021) and fire ratings favor AAC's superior performance characteristics

CLIMATE RESILIENCE

AAC's resistance to fire, hurricanes, earthquakes, and floods positions it as material of choice for resilient construction with insurance premium reductions

LABOR SHORTAGES

430,000 unfilled construction positions as of 2025; AAC requires 50% less labor than traditional masonry, reducing project timelines 30-40%

SUSTAINABILITY REQUIREMENTS

Lower embodied energy, reduced transportation emissions, and superior thermal performance supporting net-zero buildings

INNOVATION & EVERY CELL

Cut construction schedules by weeks…
Reduce lifecycle costs

STRONGER. LIGHTER. READY.

AAC XBETON are fast to construct with lower craneage requirements as they are lighter in weight

FIREPROOF UP TO 6500°F

AAC XBETON Elevated fire exposure and insurance burden, increasing premiums by up to 124% in wildfire-prone regions. Timber structures face growing scrutiny from underwriters as climate change intensifies fire seasons.

PANEL INSTALLATION

With its overall volumetric weight very light compared to other "light weight" Panels, AAC XBETON Panel is easy to be installed and applied in mass construction. In addition, the height and thickness ofthe panel can be customized to suit the design of each building and reduce the time of construction.

XBETON TECHNOLOGY & OPERATIONS

CORE AAC TECHNOLOGY

Autoclaved aerated concrete represents proven technology with over 100 years of global application. The manufacturing process combines sand, cement, lime, water, and aluminum powder to create lightweight cellular structure with exceptional properties. Steam curing under pressure in autoclaves creates tobermorite crystals providing strength and stability. Our Manufacturing facilities will employ state-of-the-art European equipment from established suppliers including Wehrhahn, Masa, and Hess AAC Systems, enabling production flexibility while maintaining consistent quality standards.

PROPRIETARY XBETON™ TECHNOLOGY

The partnership holds exclusive Worldwide distribution rights to XBeton™ Dose Pack, a revolutionary nano-graphene admixture technology substantially enhancing AAC performance. Independent testing validates impressive performance improvements:

Performance Metric	Improvement
Compressive Strength (ASTM C39)	200% increase
Permeability Reduction (ASTM C1202)	400% reduction
Flexural Strength (ASTM C78)	100% increase
Fire Resistance	4 hours to 12 hours (up to 6,500°F)
