

BUILT FOR EVERY PROJECT TYPE

We offer a product line that encompasses most all materials needed to construct residential and light commercial buildings, including the following

BLOCKS

Durable and resistant, AAC blocks provide excellent thermal and acoustic insulation, structure, and fire

LINTELS & U-BLOCKS

Aircrete lintels are special load-bearing reinforced products. They serve as beams to support the weight of the wall over window or door openings.

WALL PANELS

External wall and internal partition panels are the main elements of the Aircrete Building System for fast and cost-effective building requirements.

CLADDING PANELS

Aircrete cladding panels are unique AAC products for facade applications. The product is reinforced but remains extremely light due to 35-50mm thickness.

FLOOR & ROOF PANELS

Lightweight floor/roof panels are load-bearing elements, used in residential

Next-Generation AAC with NANO Technology

Build Smarter, Safer, Greener, With **XBeton™**

What is XBeton™?

XBeton™ is a revolutionary building material made from Autoclaved Aerated Concrete (AAC) infused with advanced NANO technology, engineered to deliver superior performance, safety, and sustainability. Whether you're building homes, high-rises, or industrial facilities — **XBeton™** offers a smarter, stronger, and more efficient way to build.

Built for Every Project Type

- ✓ Residential & Multifamily
- ✓ Commercial Buildings
- ✓ Industrial Facilities
- ✓ LEED & Green Projects

Fire Resistant

Non-combustible. Withstands temps up to 6500°F for several hours. Certified up to 4-hour fire ratings.

Thermal Insulation

Built-in air pockets reduce heating/cooling costs by up to 50%. Stay cool in summer and warm in winter.

Acoustic Insulation

Excellent acoustic dampening for quieter indoor environments. Perfect for residential and commercial projects.

Moisture Resistant

Breathable yet water-resistant. Prevents mold, improves indoor air quality.

Pest Resistant

Inorganic. Doesn't attract termites or pests. No dry rot. No need for chemical treatments.

Earthquake Safe

Lightweight and flexible — reduces seismic load and increases structural safety.

Cost Efficiency

Save 30–40% in materials, transportation & long-term energy costs compared to wood, CMU, or tilt-up.

Fast Build Time

Lightweight & large block sizes reduce labor time by 30–40%. Easy to handle on-site.

Proprietary Beton™ Technology

The partnership holds exclusive Worldwide distribution rights to **Beton™** Dose Pack, a revolutionary nano-graphene admixture technology substantially enhancing AAC performance. Independent testing validates impressive performance improvements:

40%

Faster Construction

30%

Lower Total Cost

50%

Less HVAC Energy Use

The XBeton™ Dose Pack formulations:

XBOND™

AAC Thin-Set & Panel Adhesive

XFINISH™

Exterior & Interior Finish Coats

XSEAL™

Joints, Flashings & WRB/Vapor Control

XBASE™

Leveling & Structural Repair

XRENDER™

Graphene-Reinforced Stucco/Render
